

# How to identify which Piston you require.

1

## What type of Piston is it?

There are two types of Gas Piston for the Salice Lift system. The standard piston is called "LIFT-O-MAT" whereas the progressive piston is called HYDRO-LIFT

If your piston allows the door to be stopped at any position you will require the Progressive "HYDRO-LIFT" Piston. If your piston will only allow the door to stop at the end position you will require the Standard "LIFT-O-MAT" piston.

Please see the details below to identify the name of your piston.

2

## What power is it?

The power rating is specified in Newtons (n). It should be either 250n, 350n, or 450n. If it is anything other than this please contact us for more details.
